

Ideation Phase

Brainstorm & Idea Prioritization

Date	07 july 2026
Team ID	
Project Name	DarshanEase
Maximum Marks	

Step-1: Team Gathering, Collaboration and Select the Problem Statement

During the ideation phase, the team conducted discussions to identify real-world problems faced by devotees visiting temples. After collaborative brainstorming and research, the team identified the major issue of overcrowding and lack of organized systems for temple visits.

Devotees often travel long distances to visit temples but face problems such as:

- Long waiting queues for Darshan
- Lack of reliable temple timing information
- No centralized platform for temple discovery
- Inconvenient and non-transparent donation systems
- Difficulty managing large crowds during festivals and peak seasons

After evaluating these problems, the team finalized the problem statement:

Problem Statement:

Devotees face difficulties such as overcrowding, long waiting times, lack of accurate information, and inconvenient donation processes while visiting temples. There is a need for a centralized digital platform that allows users to explore temples, book Darshan slots in advance, and make secure online donations.

To address this issue, the team proposed DarshanEase, a modern digital platform designed to simplify temple visits through online slot booking and transparent donation management.

Step-2: Brainstorm, Idea Listing and Grouping

The team conducted brainstorming sessions to generate multiple possible solutions to the identified problem. Ideas were discussed, categorized, and grouped based on feasibility and usefulness.

Ideas Generated During Brainstorming

1. Online Darshan slot booking system
2. Digital donation platform
3. Temple information directory
4. Real-time crowd management system

5. Temple event notifications
6. Mobile-friendly temple booking website
7. Multi-role platform for devotees, organizers, and administrators
8. Digital queue management system
9. Secure authentication and booking system
10. Temple discovery by location or category

Grouping of Ideas

1. User Experience Features

- Temple search and discovery
- Temple information and images
- Online slot booking
- Mobile responsive interface

2. Temple Management Features

- Temple profile management
- Slot scheduling system
- Crowd management tools

3. Financial & Transaction Features

- Online donation system
- Secure payment processing
- Donation tracking

4. System Administration

- Admin dashboard
- Organizer dashboard
- User authentication and authorization

Step-3: Idea Prioritization

To determine the most feasible and impactful solution, the team prioritized ideas based on impact, feasibility, and user value.

High Priority Features

- Online Darshan slot booking
- Temple information and discovery system

- Secure authentication system
- Temple organizer dashboard
- Online donation system

Medium Priority Features

- Real-time slot availability
- Booking history tracking
- Admin monitoring dashboard

Future Enhancement Features

- AI-based crowd prediction
- AR/VR temple tours
- Multilingual platform support
- Integrated travel booking services

Final Selected Solution

The team finalized DarshanEase, a full-stack web platform that enables devotees to:

- Explore temples across regions
- Book Darshan slots in advance
- Make secure online donations
- View temple details and facilities
- Experience a smooth and organized pilgrimage journey

This solution effectively addresses the problem of overcrowding and inefficient temple management by introducing a digital queue management and temple discovery platform.
